

Item 04 – GRI Sector Standard Project for Financial Services – Project proposal For GSSB approval

| | |
|-------------|-----------------|
| Date | 30 January 2023 |
|-------------|-----------------|

| | |
|----------------|------------------|
| Meeting | 16 February 2023 |
|----------------|------------------|

| | |
|--------------------|--|
| Description | This document sets out the project proposal to develop Sector Standards for the banking, insurance, and capital markets sectors. |
|--------------------|--|

The Standards Division recommends producing three standards for banking, insurance, and capital markets under a single project, titled 'GRI Sector Standard Project for Financial Services'. This project responds to the commonality of these sectors as financial asset holders and investors in other sectors and the need to take a consistent approach to report on impacts that are relevant to an organization as a result of this type of business relationship.

In accordance with the [Due Process Protocol](#), a draft project proposal was submitted to the GSSB and discussed in October 2022. Subsequently, the draft proposal was circulated to the GRI Board and Stakeholder Council for feedback. No feedback was received from either body. Additionally, since October 2022, consultations with various stakeholders have taken place, providing the basis for certain changes to the final project proposal.

Based on stakeholder feedback, it is proposed that payment providers are included within the banking sector, along with investment banks, which were originally included within the capital markets sector in the draft project proposal. Furthermore, stock and commodity exchanges, as well as rating agencies, will be removed from the capital markets sector and the project's scope. It is intended for such organizations to be included in future Sector Standards. Similarly, real estate investment trusts (REITs) will be excluded from this project's scope, with the intention to include them in a future Sector Standard concerning the real estate sector.

Please note: The commencement date of this project is projected for Q2 of 2023. A finalized start date is subject to resource availability.

This document has been prepared by the GRI Standards Division and is made available to observers at meetings of the Global Sustainability Standards Board (GSSB). It does not represent an official position of the GSSB. Board positions are set out in the GRI Sustainability Reporting Standards. The GSSB is the independent standard setting body of GRI. 1 **Project background**

2 In February 2019, the Global Sustainability Standards Board (GSSB) approved the [GRI Sector](#)
3 [Program](#) to improve clarity and consistency in sustainability reporting.

4 Standards will be developed for the banking, insurance, and capital markets per the [list of sectors](#)
5 approved by the GSSB in November 2020. These three Standards will be developed within the
6 bounds of one project.

7 The impacts that banking, insurance, and capital markets contribute through their holding of financial
8 assets are similar and, as such, should be consistently reported across the three sectors.

9 Similar stakeholder expectations also exist across the three sectors, and the institutions in which
10 these stakeholders are found cover all financial services industry sectors.

11 At the same time, banking, insurance, and capital markets carry out specific activities and operate
12 under different regulatory regimes. For this reason, each sector should be given enough room to tailor
13 the reporting recommendations to their needs.

14 **Sector overview**

15 Financial services organizations are intermediaries between all other economic actors, channeling
16 money from savers to borrowers, facilitating payments, and matching people who want to lower risk
17 with those willing to take on that risk.

18 The financial services industry is a substantive part of the economy, contributing about 5% of GDP in
19 the European Union and more than 8% in the United States. However, its real importance lies in its
20 central position in the economy, where few activities could function without credit, insurance, capital
21 markets, or payment services.

22 **Divisions within financial services**

23 There is a range of different sub-sectors and activities within financial services. No single
24 classification captures all this variety, partly because the criterion to differentiate one activity from the
25 other is often rooted in regulations that change from country to country and evolve over time. There is
26 also a fair amount of integration between the sectors, with many large asset managers owned by
27 either banks or insurance companies.

28 It is proposed to organize financial services into three sectors: banking, insurance, and capital
29 markets. This grouping is based on similar sustainability impacts and the way these organizations are
30 involved with impacts, namely through investment in other sectors. Below is a detailed description of
31 the three sectors.

32 It is proposed that these Standards be titled as follows:

- 33 • GRI 17: Banking Sector 20XX
- 34 • GRI 18: Insurance Sector 20XX
- 35 • GRI 19: Capital Markets Sector 20XX

36 The scope and name of these standards may deviate from this proposal following recommendations
37 from the technical committees or other input gathered through the project.

38 **Banking**

39 Banks are institutions that mainly take in deposits and provide loans.

40 It is proposed that the Sector Standard for banking will apply to organizations whose primary purpose
41 is one or more of the following activities:

- 42 • Banking
- 43 • Consumer finance, including credit card services, mortgage lenders, microfinance institutions,
44 and personal and student loan services
- 45 • Investment banking
- 46 • Payment providers

47 Investment banks facilitate complex and large transactions for corporate clients, such as mergers and
48 acquisitions, IPOs, and debt financing. Quite often, investment banks also offer typical banking
49 services to retail clients.

50 Payment providers are inextricably linked to banking and are increasingly offering simple banking
51 services, such as short-term consumer credit.

52 Given the significant overlap and integration between financial technology (fintech) and payment
53 providers, it is important to clarify that the banking sector will not include fintech companies that
54 primarily develop enabling technologies (e.g., software products) for the financial services sectors.
55 Such companies will form part of future Sector Standard(s) covering software.

56 There are more banks than other financial institutions; they are also larger on average and have a
57 higher public profile. Most people utilize a range of financial services offered by banks, which may
58 have substantial and direct impacts on their welfare.

59 *Table 1: Proposed sector key for the Banking Sector Standard*

| Classification Standard | Classification No. | Classification Name |
|-------------------------|--------------------|---|
| GICS® | 4010 | Banks |
| | 40201050 | Commercial & Residential Mortgage Finance |
| | 40201060 | Transaction & Payment Processing Services |
| | 40202010 | Consumer Finance |
| | 40203020 | Investment Banking & Brokerage |
| | | |
| ICB | 3010 | Banks |
| | 30201020 | Consumer Lending |
| | 30201025 | Mortgage Finance |
| | 30202000 | Diversified Financial Services |
| ISIC | 641 | Monetary intermediation |
| | 6491 | Leasing |

| | | |
|--------------|-------|--------------------------------|
| | 6492 | Other credit granting |
| SICS® | FN-IB | Investment Banking & Brokerage |
| | FN-CB | Commercial Banks |
| | FN-CF | Consumer Finance |
| | FN-MF | Mortgage Finance |

60 Note: Tables 1, 2, and 3 list the relevant classifications from external classification standards,
61 specifically the International Standard Industrial Classification of All Economic Activities (ISIC),
62 Industry Classification Benchmark (ICB), Global Industry Classification System (GICS), and SICS
63 Sustainable Industry Classification System® (SICS®).¹

64 Insurance

65 Insurance organizations offer risk management in the form of insurance contracts.

66 It is proposed that the Sector Standard for insurance will apply to organizations whose primary
67 purpose is the provision of the following products or services:

- 68 • Life insurance
- 69 • Non-life insurance, including:
 - 70 ○ Health insurance
 - 71 ○ Travel insurance
 - 72 ○ Property insurance
 - 73 ○ Motor, marine, aviation, and transport insurance
 - 74 ○ Casualty and accident insurance
- 75 • Reinsurance
- 76 • Insurance intermediaries, for example agents and brokers

77 Insurance intermediaries, such as agents and brokers, while not providing insurance policies, can
78 influence the way that the insurance sector operates and are thus included in this sector.

79 Insurance organizations can have distinct sustainability impacts because of the specific nature of their
80 product. They can help or hinder the development of certain activities by changing the conditions
81 under which they offer insurance. Their business model is directly affected by the physical effects of
82 climate change.

83 *Table 2: Proposed sector key for the Insurance Sector Standard*

| Classification Standard | Classification No. | Classification Name |
|-------------------------|--------------------|---------------------|
| GICS® | 4030 | Insurance |
| ICB | 3030 | Insurance |

¹ [Sustainable Industry Classification System®](#) or SICS® is the classification system of SASB.

| | | |
|--------------|-------|---|
| ISIC | 651 | Insurance |
| | 652 | Reinsurance |
| | 662 | Activities auxiliary to insurance and pension funding |
| SICS® | FN-IN | Insurance |

84 Capital markets

85 Organizations in this sector provide or facilitate the investment of money in order to generate financial
86 returns.

87 It is proposed that the Sector Standard for capital markets will apply to:

- 88 • Asset owners
- 89 • Asset managers
- 90 • Pension funds
- 91 • Sovereign wealth funds

92 *Table 3: Proposed sector key for the Capital Markets Sector Standard*

| Classification Standard | Classification No. | Classification Name |
|-------------------------|--------------------|--|
| GICS® | 40203010 | Asset Management & Custody Banks |
| | 40203030 | Diversified Capital Markets |
| ICB | 30202000 | Diversified Financial Services |
| | 30202010 | Asset Managers & Custodians |
| ISIC | 642 | Holding companies |
| | 643 | Trusts |
| | 6499 | Other financial services activities |
| | 653 | Pension funds |
| | 6619 | Other activities auxiliary to financial services |
| | 663 | Fund management |
| SICS® | FN-AC | Asset Management & Custody Activities |

93 Table 3 captures the variety of organizations that fall under this sector. The key criterion to group
94 these organizations is that their main sustainability impact happens through the provision of capital to
95 other economic sectors. Asset owners and managers make decisions on allocating capital towards
96 more or less sustainable activities.

97 Banks and insurers also have substantial sustainability impacts through capital allocation to other
98 activities, which should be treated consistently across the three financial services sectors. This is the
99 key reason for proposing to develop the three standards under a single project.

100 Based on various stakeholder consultations, it is proposed that stock and commodity exchanges,
101 rating agencies, and real estate investment trusts (REITs) be excluded from this project's scope. It is
102 also proposed that investment banking be included in the banking sector rather than in the capital
103 markets sector.

104 **Sustainability impacts**

105 The key criterion for prioritizing sectors is their sustainability impacts. This takes into
106 account the significance of the sector's impacts, considering their scale, scope, character, and
107 likelihood. The criterion also considers the sector's size, worldwide distribution, and the number of
108 organizations from that sector that can use GRI Standards.

109 Based on this criterion, banking, insurance, and capital markets were selected because of their
110 central role in facilitating all economic activities, which translates into a crucial responsibility for
111 sustainability impacts across all sectors.

112 When considering the sustainability impacts of these sectors, it is useful to distinguish between those
113 caused by organizations directly as a result of their activities and those to which organizations
114 contribute or are directly linked through their capacity to allocate capital and provide insurance
115 services.

116 Examples of direct impacts include those that organizations have on their workers and customers, as
117 well as those related to their capacity to evade tax or host corrupt activities. The Standards Division's
118 research has identified impacts that can be material in these sectors as follows:

- 119 • Financial inclusion
- 120 • Diversity and equal opportunity
- 121 • Consumer privacy
- 122 • Anti-corruption
- 123 • Fair advice and transparent information
- 124 • Labor conditions

125 Impacts resulting from business relationships are broader because financial services organizations
126 have business relationships that span all sectors of the economy. Because these organizations can
127 determine the implementation of many economic activities through the allocation of capital and
128 provision of insurance services, these impacts are larger in scale.

129 Climate change receives the most attention of all impacts that organizations in these sectors
130 contribute to through capital allocation. The Paris Aligned Investment Initiative (PAII), one of the most
131 relevant institutions in this field, states that the financial industry's role in the climate transition is to
132 decarbonize investment portfolios and increase investment in climate solutions in a way that is
133 consistent with a Net Zero emissions future. This project will consider other impacts beyond climate
134 change when providing recommendations for organizations in these sectors to report on the impacts
135 they contribute to through capital allocation.

136 The impacts mentioned in this section provide a first indication of the scope of issues covered by the
137 proposed project. However, the topics recommended for inclusion within the Sector Standards for
138 banking, insurance, and capital markets will be determined by a multi-stakeholder process in
139 accordance with the Due Process Protocol and may diverge from those contained within this project
140 proposal.

141 **Project objectives**

142 The primary objective of this project is to develop three Sector Standards that improve the
143 sustainability reporting of banking, insurance, and capital markets organizations, making reporting
144 comprehensive and consistent across the sectors.

145 These Sector Standards will:

- 146 • Identify and describe the likely material topics for a reporting organization in the banking,
147 insurance, and capital markets sectors based on their most significant impacts.
- 148 • Provide evidence and authoritative references for these topics to assist organizations in
149 identifying if they are material for them.
- 150 • Identify and list appropriate disclosures for reporting on those topics.

151 As per the 2021 revision of GRI Universal Standards, organizations in the banking, insurance, and
152 capital markets sectors that want to report in accordance with GRI Standards will be required to use
153 the applicable Sector Standard.

154 Recommendations by the technical committees may also be made regarding the following:

- 155 • The scopes and names of each Sector Standard.
- 156 • The most effective way to include reporting on impacts that contributed to or directly linked via
157 business relationships, such as through capital allocation, in Sector Standards.
- 158 • Other considerations that may be relevant to Sector Standards for related sectors.
- 159 • Revisions or updates to other GRI Standards.

160 Impacts identified within this project for which no GRI Standard exists will be assessed and prioritized
161 by the GSSB for future GRI Standards development.

162 **Division of responsibilities**

163 Three technical committees (TCs) will be formed to support the development of each Standard.

164 It is proposed that each TC define the impacts caused by organizations' activities in their respective
165 sectors and identify the relevant reporting for these.

166 Given the overlap across the three sectors regarding investing in other non-financial sectors, the TCs
167 will cooperate via a cross-sector exchange. This cooperation will help define the approach and
168 reporting relevant to the impacts organizations have through capital allocation and other impacts the
169 sectors have in common.

170 The cross-sector exchange will also provide an opportunity to identify and discuss any misalignment
171 between the three sectors' scopes and the descriptions and reporting identified for likely material
172 topics common to all.

173 Each TC will make the final recommendations on their respective Standard's development. However,
174 as part of their Terms of Reference, they will be obliged to work towards alignment across the three
175 Standards.

176 This arrangement intends to represent all stakeholders in the process, a coherent approach across
177 the three sectors in describing and identifying relevant disclosures, and an efficient division of labor to
178 produce three standards.

179 The Standards Division will draft the Standards, and the GSSB will have oversight and final
180 approval before release. The Standards Division will ensure coherence between the Sector Standards
181 for banking, insurance, and capital markets and any Standards approved or under development.
182 The project will be conducted in accordance with the [GSSB Due Process Protocol](#).

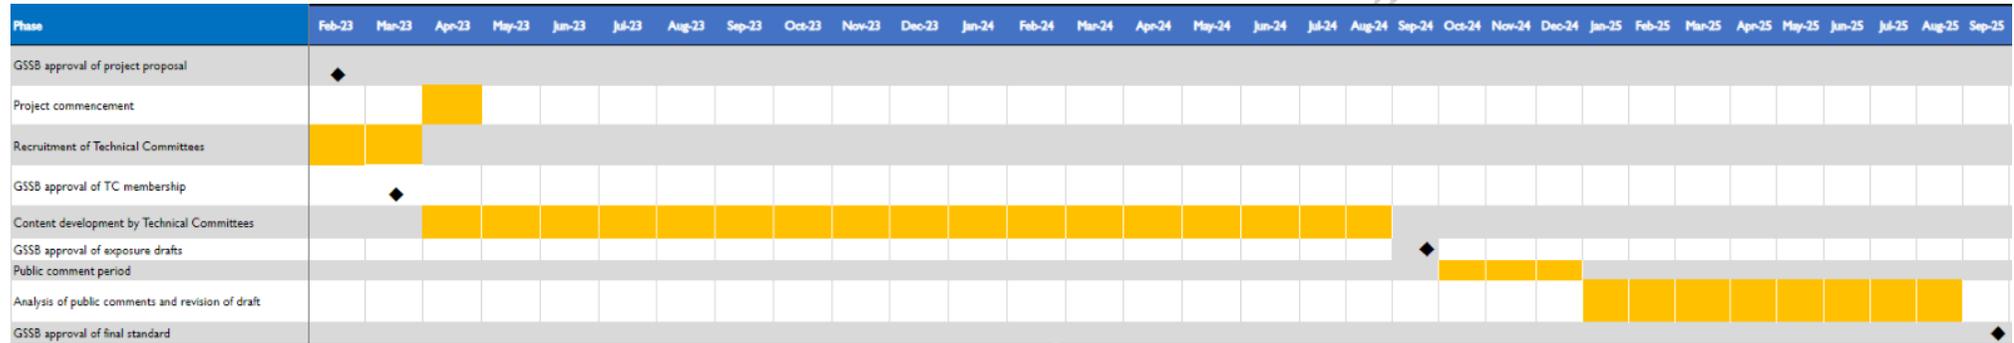

183 **Timeline**

184 The commencement date of this project is projected for Q2 2023. A finalized start date is subject to
185 resource availability. Given that this project will develop three Sector Standards, it is expected that it
186 will have a longer duration than other Sector Standard projects. Table 2, on the following page,
187 outlines the anticipated project duration. Predicted dates of key milestones will be confirmed once
188 known.

This document does not represent an official position of the GSSB

Table 2: Estimated duration of Sector Standard Project for Financial Services²

189

² Project scheduling changes may occur over the course of the project, including extensions to the duration of project due to approval processes or other circumstances.

This document has been prepared by the GRI Standards Division and is made available to observers at meetings of the Global Sustainability Standards Board (GSSB). It does not represent an official position of the GSSB. Board positions are set out in the GRI Sustainability Reporting Standards. The GSSB is the independent standard setting body of GRI.
