# Item 04 – GRI Universal Standards Project – Draft GSSB basis for conclusions

## For GSSB information

<b>Date</b>	10 May 2021
<b>Meeting</b>	10 June 2021
<b>Project</b>	GRI Universal Standards Project
<b>Description</b>	<p>This document summarizes the significant issues from comments received on the <a href="#">GRI Universal Standards exposure draft</a>, during the public comment period from 11 June 2020 to 9 September 2020, and the GSSB responses to the significant issues raised.</p> <p>The full set of public comments can be downloaded from the Review of the Universal Standards <a href="#">project page</a> on the GSSB website.</p> <p>In line with the <a href="#">GSSB Due Process Protocol</a>, the final version of this document is to be published on the Review of the Universal Standards project page together with the GRI Universal Standards 2021 after their approval.</p>

This document has been prepared by the GRI Standards Division and is made available to observers at meetings of the Global Sustainability Standards Board (GSSB). It does not represent an official position of the GSSB. Board positions are set out in the GRI Sustainability Reporting Standards. The GSSB is the independent standard setting body of GRI. For more information visit [www.globalreporting.org](http://www.globalreporting.org).

## 26 About this document

27 This document presents the significant issues raised by respondents regarding the [exposure draft of](#)  
28 [the GRI Universal Standards](#) during the public comment period from 11 June 2020 to 9 September  
29 2020.

30 The document summarizes feedback provided by respondents through the public comment survey  
31 hosted on the Review of the Universal Standards project page and official feedback submitted by  
32 email. Where relevant, it also references feedback received from respondents at regional workshops  
33 held during the public comment period.

34 All individual comments received, together with an analysis of the significant issues raised, were  
35 considered by the GSSB in their review of the Universal Standards. This document provides a  
36 summary of how the GSSB has responded to the significant issues raised in the public comment  
37 period.

38 The full set of comments received can be downloaded from the [Review of the Universal Standards](#)  
39 [project page](#) on the GSSB website.

40 The GRI Universal Standards 2021 can be downloaded [here](#) [GSSB website].

## 41 Introduction

### 42 Objectives for reviewing the Universal Standards

43 The [project proposal](#) for the review of the GRI Universal Standards was approved by the Global  
44 Sustainability Standards Board (GSSB), GRI's independent standard setting body, at its meeting on  
45 26 March 2019.

46 The project was initiated following the recommendations from the GRI Technical Committee on  
47 Human Rights Disclosure. The project also drew on feedback received from the GSSB during the  
48 transition from the G4 Guidelines to the GRI Standards, feedback received from reporting  
49 organizations and other stakeholders, and information gathered from the review of sustainability  
50 reports using the GRI Standards. Overall, the project aimed to:

- 51 • provide greater clarity on key concepts, reporting principles, and disclosures in the Universal  
52 Standards and ensure they are aligned with recent developments in responsible business  
53 conduct;
- 54 • integrate the expectations of due diligence into the GRI Standards;
- 55 • assist reporting organizations in understanding the reporting requirements and how they  
56 demonstrate compliance in a transparent way;
- 57 • drive consistent application of the GRI Standards;
- 58 • encourage more relevant and comprehensive reporting for experienced reporting  
59 organizations;
- 60 • enable first-time reporters and SMEs to more easily apply the GRI Standards;
- 61 • improve overall usability of the GRI Standards.

62 The project followed the [GSSB Due Process Protocol](#). A sub-committee of four GSSB members was  
63 convened to provide advice and direction for the project, and the proposed revisions were discussed  
64 with all GSSB members over the course of 18 meetings between 2019 and 2021.

### 65 Scope of the public comment

66 The exposure draft of the Universal Standards was open for public comment, as required by the  
67 [GSSB Due Process Protocol](#), from 11 June 2020 to 9 September 2020. Respondents were invited to  
68 submit their feedback on the clarity, feasibility, and relevance of the significant proposals contained in  
69 the exposure draft.

70 Several outreach activities were carried out during the public comment period, including webinars,  
71 regional workshops, and one-to-one consultations with stakeholders. Approximately 390 participants

72 attended the regional workshops, online or in-person, in Africa, Hong Kong, Latin America, Greater  
 73 China, North America, South East Asia (Malaysia, Philippines, and Singapore) and Taiwan.  
 74 Approximately 2,340 individuals attended the webinars. [Appendix 1](#) contains an overview of these  
 75 events.

## 76 Overview of submissions

77 Respondents were invited to submit their comments on the Universal Standards exposure draft using  
 78 an [online survey](#). The link to the survey was made available on the project page on the GSSB website  
 79 for the full duration of the public comment period.

80 Respondents could also submit an official letter or statement to [universal@globalreporting.org](mailto:universal@globalreporting.org).

81 A total of 144 submissions from individuals and organizations were received on the exposure draft,  
 82 consisting of 141 completed surveys and three letters. The submissions contained approximately  
 83 1,300 comments. Feedback received during regional workshops is not included in the total number of  
 84 submissions but, where relevant, a summary of significant issues raised during these consultations  
 85 has been presented alongside the significant issues raised through the public comment survey.

86 [Appendix 2](#) contains a breakdown of public comment submissions by stakeholder constituency,  
 87 organization size, and region.

## 88 Methodology for analyzing comments

89 All comments submitted by respondents were collated by the Standards Division.

90 Each comment was categorized according to its relevance to a specific Standard, section, disclosure  
 91 or a group of disclosures in the Universal Standards exposure draft, or as a cross-cutting theme. Each  
 92 comment was then sub-categorized by the respondent's:

- 93 • support for proposed content, based on its clarity, feasibility, and relevance to reporting;
- 94 • opposition to the proposed content, based on its clarity, feasibility, and relevance to  
 95 reporting;
- 96 • concern about the proposed content, based on its clarity, feasibility, and relevance to  
 97 reporting;
- 98 • proposals for new content.

99 When a respondent had raised several different points in one comment, the points were separated  
 100 into distinct comments.

101 Comments that could not be adequately summarized or interpreted have been presented, where  
 102 relevant, verbatim inside quotation marks in this summary.

103 The qualifiers indicated in Table 1 have been used to indicate the percentage of respondents that  
 104 provided feedback on a significant issue. Given that the survey mostly contained open questions to  
 105 enable respondents to provide feedback on sections of interest, not all respondents provided  
 106 comments on all sections of the exposure draft. Consequently, certain sections or disclosures have a  
 107 relatively low number of comments compared to the overall number of respondents.

108 **Table 1. Qualifiers to describe the proportion of respondents.**

Qualifier	Respondents
Majority	> 50%
Many	30-50%
Some	10-30%
A few	< 10%
One	1

# 109 Significant issues and GSSB

## 110 responses

111 In line with the [GSSB Due Process Protocol](#), this section summarizes the significant issues raised by  
112 respondents, outlines proposed changes to the Universal Standards exposure draft, and explains the  
113 reasons why significant changes recommended by respondents were, or were not, accepted by the  
114 GSSB.

115 The significant issues identified have been organized into the following sections:

- 116 • Cross-cutting issues:
  - 117 ○ Human rights
  - 118 ○ Universal Standards structure
- 119 • Issues regarding the exposure draft of GRI 101: Using the GRI Standards, including:
  - 120 ○ Key concepts in the GRI Standards
  - 121 ○ Sustainability reporting using the GRI Standards
  - 122 ○ Reporting principles
- 123 • Issues regarding the exposure draft of GRI 102: About the Organization, including:
  - 124 ○ Organizational details and reporting practices
  - 125 ○ Organizational activities
  - 126 ○ Governance
  - 127 ○ Responsible business conduct
  - 128 ○ Stakeholder engagement
- 129 • Issues regarding the exposure draft of GRI 103: Material Topics, including:
  - 130 ○ Identifying material topics
  - 131 ○ Reporting on material topics

132 This section includes references to the [Universal Standards exposure draft](#), the current Universal  
133 Standards 2016, and the revised Universal Standards 2021. When referring to the content in the  
134 exposure draft, the titles used in the exposure draft are used. When referring to the content in the  
135 current and revised Universal Standards, the titles of the Universal Standards 2016 and Universal  
136 Standards 2021 respectively are used.

## 137 Cross-cutting issues

### 138 a) Human rights

139 A few respondents expressed opposition to the inclusion of human rights in the definition of 'material  
140 topic'. These respondents stated that:

- 141 • 'human rights impacts' are already covered by 'impacts on people';
- 142 • it is not clear why the issue of human rights was highlighted, while other issues such as  
143 climate were not;
- 144 • the definition may imply that human rights are more important than other topics related to  
145 people, such as health and safety;
- 146 • for many reporters, particularly those in developed countries where effective regulatory  
147 frameworks exist, human rights are not a material issue.

148 One respondent disagreed with requiring reporting on human rights, stating that not all companies  
149 have (material) issues with human rights.

150 *GSSB response: The reference to 'human rights impacts' has been maintained in the definition of*  
151 *'material topic', as well as the human rights-related disclosures, as human rights are the most*  
152 *fundamental level of protection provided to people in authoritative intergovernmental instruments.*  
153 *Impacts on human rights are a cross-cutting issue that have always occurred, and will continue to*  
154 *occur in the future, thus making them one of the most vital types of impacts for the GRI Standards to*  
155 *address.*

## 156 **b) Universal Standards structure**

157 Many respondents expressed support for the revised structure and submitted that the proposed  
158 changes:

- 159 • are coherent and provide clarity;
- 160 • will facilitate more consistent and streamlined reporting;
- 161 • are an improvement.

162 *GSSB response: No further changes have been made.*

# 163 **GRI 101: Using the GRI Standards**

## 164 **Section 2. Key concepts in the GRI Standards**

### 165 **a) Impact**

166 A few respondents requested clarification on the concept of 'impact', including:

- 167 • the difference between inward and outward impacts;
- 168 • the relationship between 'risk' and 'impact'.

169 *GSSB response:*

170 *The terms inward and outward impacts have been removed, but the meaning of these concepts has*  
171 *been clarified. See section 1.2 Users and Box 1. Sustainability reporting and financial and value*  
172 *creation reporting in GRI 1: Foundation 2021.*

173 *The relationship between 'risk' and 'impact' has been clarified. See Section 1 in GRI 3: Material*  
174 *Topics 2021.*

### 175 **b) Material topic**

176 Many respondents expressed support for the revised concept of 'material topic'. These respondents  
177 stated that they welcome:

- 178 • the focus on outward impacts;
- 179 • the alignment of this concept with authoritative intergovernmental instruments on business  
180 and human rights and responsible business conduct;
- 181 • the simpler and clearer approach, which will help to avoid the misinterpretation of the  
182 definition to mean 'impact on the company'.

183 A few respondents suggested adopting a double materiality approach. These respondents stated that:

- 184 • the materiality definition should also explicitly consider financial materiality and the impacts on  
185 the company;
- 186 • a double materiality approach will enable a holistic analysis of a reporting organization;
- 187 • a double materiality approach will improve the connectedness between financial and non-  
188 financial reporting;
- 189 • a double materiality approach is aligned with integrated thinking and integrated reporting.

190 A few respondents expressed disagreement with the revised concept of 'material topic'. These  
191 respondents proposed retaining the Materiality principle as stated in the current Universal Standards  
192 2016 and suggested that removing 'substantively influences the assessments and decisions of  
193 stakeholders' from the definition could lead to less engagement with stakeholders. They raised

194 concern that this could lead to identification of material topics more heavily focused on the  
195 organization's interests than the stakeholders' interests.

196 A few respondents commented on the use of the materiality matrix included in the current Universal  
197 Standards 2016. Respondents were divided on the usefulness of the matrix. Those opposed stated  
198 that the matrix tends to encourage overly simplistic issue identification and may undermine  
199 accountability and appropriate management controls for a given topic. Those in favor stated that a  
200 visual presentation of material topics is a useful tool for understanding the relative importance of an  
201 organization's material topics and makes materiality more transparent, understandable and  
202 applicable.

203 GSSB response:

- 204 • The definition of 'material topic' proposed in the Universal Standards exposure draft has been  
205 maintained.
- 206 • The importance and role of stakeholder engagement in identifying an organization's most  
207 significant impacts has been clarified more prominently. See section 2 in GRI 1: Foundation  
208 2021.
- 209 • The relationship between sustainability reporting and financial reporting has been clarified by  
210 explaining how the information derived from sustainability reporting forms a key input for  
211 financial risk assessment and for financial reporting. See Box 1. Sustainability reporting and  
212 financial and value creation reporting in GRI 1: Foundation 2021.
- 213 • The materiality matrix has not been reinstated, as the revised concept of 'material topic' no  
214 longer encompasses two dimensions. The GSSB will consider developing further guidance on  
215 materiality for reporting organizations in a format such as a website FAQ, which could also  
216 include suggestions for visuals. This may include options for visual representations of the  
217 revised GRI concept of materiality and its connection to double materiality.

#### 218 **c) Due diligence**

219 Two respondents raised concerns about the feasibility of meeting the expectations of due diligence by  
220 new reporters and suggested removing the concept from the GRI Standards.

221 GSSB response: Due diligence has been retained as a key concept, in line with expectations in the  
222 authoritative intergovernmental instruments with which the GRI Standards seek to align.

223

#### 224 **d) Stakeholder**

225 Some respondents expressed support for the revised concept of 'stakeholder'. These respondents:

- 226 • welcomed the alignment of the definition with the OECD;
- 227 • welcomed the clarity of the proposed definition;
- 228 • welcomed the consistency with the approach to materiality focused on outward impacts;
- 229 • noted that the proposed definition addresses the shortcoming of the current definition, which  
230 creates an incentive for organizations to pick and choose stakeholders that suit the  
231 organizations' own views.

232 A few respondents expressed disagreement with the revised concept of 'stakeholder' and suggested  
233 the definition should encompass those that 'affect the organization' as well as those that 'are affected  
234 by the organization' (in line with the definition in the current Universal Standards 2016).

235 Two respondents suggested clarifying the relationship between 'stakeholders' and 'rightsholders' and  
236 between 'interests' and 'rights'.

237 GSSB response: The definition of 'stakeholder' proposed in the Universal Standards exposure draft  
238 has been maintained. The relationship between 'stakeholders' and 'rightsholders', and between  
239 'interests' and 'rights' has been clarified. See section 2.4 Stakeholder in GRI 1: Foundation 2021.

## 240 Section 3. Sustainability reporting using the GRI Standards

### 241 a) Revised approaches to using the GRI Standards for sustainability reporting

242 Some respondents expressed support for the proposal to allow two approaches for using the GRI  
243 Standards: reporting in accordance with the GRI Standards and reporting with reference to the GRI  
244 Standards. These respondents stated that this proposal will:

- 245 • provide clarity and increase transparency about how the GRI Standards are used;
- 246 • make it easier to understand the level of adherence to the GRI Standards;
- 247 • improve the quality and consistency of reporting;
- 248 • set a higher standard for reporting, by driving reporting in accordance with the GRI Standards.

249 A few respondents raised concerns about the proposal to allow two approaches for using the GRI  
250 Standards. These respondents stated that the two approaches can:

- 251 • create quality distinctions between reporting organizations, similar to the 'Core' and  
252 'Comprehensive' in accordance options;
- 253 • make the 'in accordance with' approach unattainable and thereby drive organizations to report  
254 'with reference to' and discourage from considering sustainability reporting as a path of  
255 progressive improvement;
- 256 • entice organizations to use the 'with reference to' approach to report on issues that are  
257 favorable to an organization, but avoid reporting on challenges, risks and failures;
- 258 • be misunderstood by stakeholders who are not familiar with the GRI Standards.

259 Some respondents expressed support for having one option to report in accordance with the GRI  
260 Standards. These respondents stated that:

- 261 • the 'Core' and 'Comprehensive' options are not effectively used;
- 262 • the value of the 'Comprehensive' option is not clear, it is not widely used and did not evolve  
263 as a differentiator from the 'Core' option;
- 264 • this will remove the perception that organizations using the 'Comprehensive' option are  
265 'better' than organizations using the 'Core' option;
- 266 • this will facilitate understanding of a reporter's application of the GRI Standards – a reporter is  
267 either in accordance with the GRI Standards or not.

268 Some respondents raised concerns about having one option to report in accordance with the GRI  
269 Standards. These respondents stated that:

- 270 • many organizations use the 'Core' option, and reasons behind the application of the 'Core'  
271 option and the barriers to transition to the 'Comprehensive' option need to be better  
272 understood;
- 273 • the 'Core' and 'Comprehensive' options enable organizations to evolve their reporting over  
274 time;
- 275 • it will be challenging to comply with all (additional) requirements, especially for 'Core'  
276 reporters and SMEs;
- 277 • it will be difficult to report all disclosures in GRI 102: About the Organization and GRI 103:  
278 Material Topics if reasons for omission are not permitted, especially the governance  
279 disclosures;
- 280 • meeting the revised in accordance level is only possible with sufficient transition and  
281 implementation time.

282 Some respondents raised individual points. These respondents did not clearly express support or  
283 disagreement with the revisions, nor did they raise concerns. For example, these respondents stated  
284 that:

- 285 • organizations that are less mature and start their reporting journey reporting with reference to  
286 the GRI Standards should transition to reporting in accordance with the GRI Standards over  
287 time;
- 288 • it is important to make clear that reporting with reference to the GRI Standards has  
289 significantly less requirements than reporting in accordance with the GRI Standards.

290 *GSSB response: The two approaches to using the GRI Standards proposed in the Universal*  
291 *Standards exposure draft have been maintained. An organization can report in accordance with the*

292 GRI Standards, or with reference to the GRI Standards. Reporting with reference to the GRI  
293 Standards can be used when an organization wants to report information about specific topics for  
294 specific purposes (e.g., to comply with a reporting regulation on climate change) or when an  
295 organization is unable to comply with all requirements for reporting in accordance with the GRI  
296 Standards.

297 The focus of 'Section 3. Sustainability reporting using the GRI Standards' in the exposure draft has  
298 been changed. This section now presents 'in accordance' as the recommended approach for  
299 reporting with the GRI Standards, by outlining the 'in accordance' requirements before the  
300 requirements for reporting with reference to the GRI Standards. In addition, the reference to Approach  
301 A and Approach B has been removed, to emphasize 'in accordance' as the default approach to  
302 reporting with the GRI Standards. See section 3. Reporting in accordance with the GRI Standards in  
303 GRI 1: Foundation 2021.

304 A recommendation has been added that organizations that cannot comply with all the 'in accordance'  
305 requirements should transition to reporting in accordance with the GRI Standards over time. See  
306 'Reporting with reference to the GRI Standards' at the end of section 3 in GRI 1: Foundation 2021.

307 The one option for reporting in accordance with the GRI Standards proposed in the exposure draft  
308 has been maintained, but the mechanism to use reasons for omission has been revised. Reasons for  
309 omission are now permitted for all disclosures in GRI 2: General Disclosures 2021 and GRI 3:  
310 Material Topics 2021 except for:

- 311 • Disclosure 2-1 Organizational details
- 312 • Disclosure 2-2 Entities included in the organization's sustainability reporting
- 313 • Disclosure 2-3 Reporting period, frequency and contact point
- 314 • Disclosure 2-4 Restatements of information
- 315 • Disclosure 2-5 External assurance
- 316 • Disclosure 3-1 Process to determine material topics
- 317 • Disclosure 3-2 List of material topics

318 These seven disclosures are considered critical for an organization's sustainability reporting.

319 See Requirement 6: Provide reasons for omission for disclosures and requirements that the  
320 organization cannot comply with in GRI 1: Foundation 2021.

## 321 **b) Appropriate disclosures**

322 A few respondents commented on the revised requirement to report appropriate disclosures from the  
323 GRI Topic Standards. These respondents raised concerns or requested clarification about the  
324 meaning of 'appropriate disclosures', and stated that:

- 325 • the explanation of 'appropriate disclosures' in the Universal Standards exposure draft was not  
326 sufficient for organizations to properly understand the concept and how to use it;
- 327 • the explanation creates an opportunity to 'pick and choose' what to report and to report less;
- 328 • an organization's judgement of what is appropriate may be subjective or not sufficiently  
329 transparent and will present a challenge for verification by assurance providers and other third  
330 parties;
- 331 • ultimately, it can lead to large variations in reported information, and compromise  
332 comparability of information.

333 GSSB response: The concept of 'appropriate disclosures' proposed in the exposure draft has been  
334 revised. In the exposure draft, appropriate disclosures were defined as 'disclosures that adequately  
335 capture the impacts related to the organization's material topics'. In the revised Universal Standards,  
336 the disclosures from the GRI Topic Standards required to be reported for each material topic are now  
337 defined as 'those disclosures that are relevant for reporting information about the organization's  
338 impacts in relation to a material topic'.

339 A requirement has been added for the organization to explain why Topic Standards disclosures listed  
340 for the organization's material topics in applicable GRI Sector Standards, where they are available,  
341 are not relevant to the organization's impacts. Such an explanation helps confirm that the disclosures  
342 are not relevant to the organization's impacts, and why.

343 *It has been clarified that there is no requirement for a minimum number of disclosures to report from*  
344 *the Topic Standards, and that the number of disclosures to report is based on the organization's*  
345 *assessment of which disclosures are relevant to its impacts in relation to a material topic.*

346 *See guidance to Requirement 5-a and see Requirement 5-b in GRI 1: Foundation 2021.*

347 **c) Using Sector Standards to identify and explain if topics listed in a Sector Standard are not**  
348 **deemed material by the organization**

349 The majority of respondents expressed support for the proposal to identify and explain if topics listed  
350 in an applicable Sector Standard are not deemed material by the organization. These respondents  
351 stated that such an explanation would:

- 352 • be reasonable, given that Sector Standards represent consensus on what is considered  
353 material for a sector and set an industry benchmark, developed through a rigorous standard-  
354 setting activity;
- 355 • ensure credibility of the materiality assessment process, as well as strengthen the overall  
356 reporting process and performance of the organization;
- 357 • provide transparency and confidence to stakeholders that material topics and significant  
358 impacts have not been avoided or overlooked and that all material topics have been  
359 considered, even if not all have been addressed;
- 360 • provide additional context for information users to better evaluate an organization's  
361 performance in relation to its impacts, compare the performance between companies, and  
362 engage in a subsequent dialogue.

363 In addition, these respondents suggested that the reporting expectation about the format of the  
364 explanation be clarified and submitted that:

- 365 • reporting burden must be considered when setting the expectation about the extent of  
366 information to report and a brief explanation about why a topic is not deemed material should  
367 be sufficient;
- 368 • it is not clear whether an organization would need to provide an explanation for each topic  
369 that is not deemed material, or to provide one explanation covering all topics that are not  
370 deemed material;
- 371 • the evaluation of what is deemed not material can be subjective;
- 372 • the explanation needs to be easily locatable in the report / reported information.

373 Some respondents raised concerns about the proposal to identify and explain if topics listed in an  
374 applicable Sector Standard are not deemed material by the organization. These respondents stated  
375 that such reporting would:

- 376 • be unnecessary because material topics that a company reports on are the result of, and are  
377 justified by, the materiality assessment process, and the exposure draft already includes a  
378 requirement to use the Sector Standards when identifying material topics;
- 379 • add to the subjectivity of responses and compromise clarity of reported information;
- 380 • add to the reporting burden and length of reports, especially for companies operating across  
381 several sectors;
- 382 • divert focus, time, and resources from addressing material issues / contradict GRI's  
383 approach to focus on material topics;
- 384 • risk substituting an organization's materiality assessment process.

385 In addition, a few respondents responded "I don't know" to the question about identifying and  
386 explaining if topics listed in an applicable Sector Standard are not deemed material by the  
387 organization. They submitted that:

- 388 • such reporting has the potential to strengthen the materiality assessment process but might  
389 divert time and resources from managing the impacts;
- 390 • such reporting has the potential to strengthen the materiality assessment process but  
391 presents a risk of substituting a robust materiality assessment process;
- 392 • the feasibility of such reporting depends on the scope and rigor of Sector Standards and the  
393 number of topics that are deemed not material by the organization.

394 *GSSB response: Requirement 3-b in GRI 1: Foundation 2021 has been revised to require the*  
395 *organization to determine whether each topic in the applicable GRI Sector Standards is a material*  
396 *topic for the organization. It also requires the organization to list in the GRI content index any topics*  
397 *from the applicable Sector Standards that the organization has determined as not material, and to*  
398 *explain why they are not material.*

399 *An example table and guidance about how to prepare the GRI content index have been added,*  
400 *including how to indicate when a topic listed in a Sector Standard has been determined as not*  
401 *material.*

402 **d) Identifying and explaining if topics commonly associated with sectors are not material**  
403 **when Sector Standards do not exist**

404 Many respondents raised concerns about the proposal to identify and explain if topics commonly  
405 associated with the organization's sector are deemed not material in the absence of an applicable  
406 Sector Standard. These respondents stated that such reporting:

- 407 • is subject to the materiality assessment;
- 408 • increases the reporting burden and length of reporting;
- 409 • diverts attention from managing material topics.

410 Many respondents opposed this proposal while they supported the proposal to explain when a topic is  
411 deemed not material when a Sector Standard is available, and submitted that:

- 412 • the concept of a topic being 'commonly associated' is too subjective to form the basis for a  
413 requirement and lends itself to interpretation and conflicts of interest;
- 414 • such reporting would compromise the purpose of the Sector Standards which are meant to  
415 serve as an industry benchmark.

416 Many respondents expressed support for the proposal to identify and explain if topics commonly  
417 associated with the organization's sector are deemed not material in the absence of an applicable  
418 Sector Standard. These respondents stated that such reporting will improve transparency,  
419 comparability and clarity of information, and the credibility of the materiality assessment process.

420 A few respondents supported this proposal as a good approach to risk management, while they  
421 opposed the proposal to explain why a topic is deemed not material when the Sector Standard is  
422 available.

423 A few respondents responded "I don't know" to the proposal of identifying and explaining if topics  
424 commonly associated with the organization's sector are not deemed material in the absence of an  
425 applicable Sector Standard. Seven respondents explained that if Sector Standards are meant to set  
426 an industry benchmark, in their absence such reporting would be subjective.

427 *GSSB response: A recommendation has been added to the guidance for Disclosure 3-1 (Process to*  
428 *determine material topics) in GRI 3: Material Topics 2021 clarifying that, in the absence of applicable*  
429 *Sector Standards, the organization should explain how it has considered impacts commonly*  
430 *associated with its sectors, and whether any of these impacts have been determined as not material,*  
431 *together with an explanation of why this is the case.*

432 **e) Statement of use**

433 A majority of respondents expressed support for requiring a statement of use acknowledging the  
434 highest governance body's or most senior executive's responsibility for preparing the reported  
435 information in accordance with, or with reference to, the GRI Standards. These respondents stated  
436 that it will:

- 437 • provide transparency and promote accountability and effective governance of sustainability  
438 reporting and the application of the GRI Standards;
- 439 • raise awareness of sustainability at the top level and across the organization;
- 440 • improve the credibility, quality, clarity, and comparability of reported information;
- 441 • attract resources and support to the reporting process;
- 442 • align with the approach used in financial reporting;
- 443 • respond to regulatory expectations about sustainability reporting.

444 A majority of the respondents further expressed support for the highest governance body to  
445 acknowledge the quality and veracity of reported information in the statement. These respondents  
446 stated that this will:

- 447 • increase accountability of the highest governance body for managing impacts and for  
448 sustainability reporting;
- 449 • improve the quality of reporting;
- 450 • increase the need for external assurance.

451 Some respondents raised concerns about the proposal to provide a statement of use. These  
452 respondents stated that providing such a statement:

- 453 • would require a practitioner's level understanding of the GRI Standards to make it, which is  
454 not consistent with the highest governance body's general oversight role;
- 455 • is not a guarantee for the credibility or quality of the reported information;
- 456 • is redundant as the highest governance body's responsibility for, and sign-off on, the  
457 sustainability report is implied;
- 458 • will add to the reporting burden and costs of reporting;
- 459 • will compromise the utility of the GRI Standards as a tool for the highest governance body to  
460 understand and address the organization's impacts;
- 461 • will drive reporters to report 'with reference to' the GRI Standards.

462 Some respondents raised further concerns about the highest governance body acknowledging the  
463 quality and veracity of reported information in the statement of use. These respondents stated that  
464 providing such a statement would:

- 465 • create an obligation of external assurance which would increase the costs of reporting;
- 466 • be redundant because reporting in accordance with the GRI Standards requires applying the  
467 GRI reporting principles which cover report quality principles;
- 468 • present a legal liability to the highest governance body.

469 A few respondents made suggestions about how to amend the formulation of the statement of use to  
470 acknowledge the quality and veracity of reported information. These suggestions included:

- 471 • verbatim acknowledgement of the quality and veracity of reported information;
- 472 • verbatim acknowledgement of the opinion about the extent to which the information is  
473 complete and accurate;
- 474 • verbatim acknowledgement that the GRI reporting principles have been followed.

475 *GSSB response: Reference to the highest governance body and senior executives' acknowledgement*  
476 *of responsibility for the level of application of the GRI Standards has been removed from the*  
477 *statement of use. The statement of use is to be issued by the organization, and it is to specify whether*  
478 *the reported information has been prepared in accordance with, or with reference to, the GRI*  
479 *Standards.*

480 *Guidance has been added to clarify that to issue the statement of use, the organization must comply*  
481 *with the corresponding requirements for reporting in accordance with the GRI Standards or with*  
482 *reference to the GRI Standards.*

483 *Disclosure 2-14 in GRI 2: General Disclosures 2021 (Role of the highest governance body in*  
484 *sustainability reporting) has been revised to clarify the responsibility of the highest governance body*  
485 *with respect to reviewing and approving the reported information, including the organization's material*  
486 *topics. A new requirement has been added to Disclosure 2-14 for the organization to explain the*  
487 *reason for the highest governance body not being responsible for reviewing and approving the*  
488 *reported information, in situations where this is the case.*

489 *No further requirements have been added to acknowledge the quality and veracity of reported*  
490 *information, as this would be redundant with Requirement 1 in GRI 1: Foundation 2021 to apply the*  
491 *reporting principles and with Disclosure 2-5 in GRI 2: General Disclosures 2021 on the organization's*  
492 *approach to external assurance.*

493 *See Requirement 8 in GRI 1: Foundation 2021.*

## 494 Section 4. Reporting principles

### 495 a) General feedback

496 Some respondents commented on the reporting principles. These respondents:

- 497 • acknowledged the lack of description of the relationship between the key concepts and the
- 498 reporting principles and their roles in the system and function of reporting;
- 499 • suggested retaining the reporting principles for defining report content, instead of presenting
- 500 'material topic' and 'stakeholder' as key concepts;
- 501 • made one-off comments about the Accuracy, Comparability, Completeness, and Verifiability
- 502 reporting principles.

503 *GSSB response:* The introductions have been revised to clarify the function of the key concepts and

504 of the reporting principles. Wording has been amended in reporting principles Accuracy,

505 Comparability, Completeness, and Verifiability based on public comment suggestions.

506 See section 2. Key concepts and section 4. Reporting principles in GRI 1: Foundation 2021.

507

### 508 b) Sustainability context principle

509 Five respondents commented on the Sustainability context principle, including one respondent who

510 submitted their comments on behalf of 19 individuals. These respondents:

- 511 • expressed support for the retention of the Sustainability context principle;
- 512 • suggested retaining the performance-based description of the principle and adding guidance
- 513 about how to apply the principle, based on considerations of:
  - 514 ○ integrating stakeholder perspectives;
  - 515 ○ impacts on natural, human, social, and constructed (or built) capital stocks;
  - 516 ○ fair and proportionate allocations of carrying capacities of natural stocks or of shared
  - 517 or exclusive burden to produce and/or maintain anthropogenic capitals to individual
  - 518 organizations;
  - 519 ○ context-based metrics.

520 *GSSB response:* Wording in the guidance to the Sustainability context principle has been amended to

521 clarify that an organization must assess its impacts in the wider context of sustainable development,

522 including in relation to consensus on the limits and demands placed on environmental resources,

523 sustainable development goals and conditions, societal expectations and expectations of responsible

524 business conduct set out in authoritative intergovernmental instruments, and in relation to appropriate

525 local contexts. See Sustainability context principle in GRI 1: Foundation 2021.

526 No further change has been made to the guidance of the Sustainability context principle, using the

527 following rationale:

- 528 • Stakeholder perspectives and stakeholder engagement are foundational concepts and
- 529 requirements in the GRI Standards. See the key concepts of 'impact', 'material topic', and
- 530 'stakeholder' in section 2 of GRI 1: Foundation 2021, Disclosures 2-29 and 2-30, and
- 531 requirements 2-12-b-i, 2-20-a-i, and 2-20-b in GRI 2: General Disclosures 2021, and
- 532 requirements 3-1-b and 3-3-f in GRI 3: Material Topics 2021 respectively.
- 533 • Impacts on the economy, environment, and people, including impacts on their human rights,
- 534 is the foundational concept in the GRI Standards. See the key concepts of 'impact' and
- 535 'material topics' in section 2 of GRI 1: Foundation 2021.
- 536 • The GRI Standards do not set allocations, goals, targets, thresholds, or any other
- 537 benchmarks for good or bad performance. The GRI Standards contain references to, and
- 538 disclosures based on, expectations for responsible business conduct set out in authoritative
- 539 intergovernmental instruments. The GRI Standards enable organizations to report information
- 540 that can help information users make assessments about the organization's impacts on the
- 541 economy, environment, and people, and thus how the organization contributes to sustainable
- 542 development and meets the expectations set out in authoritative intergovernmental
- 543 instruments.
- 544 • The GRI Standards include quantitative context-based metrics, where such metrics have
- 545 been proposed by project working groups or technical committees based on expert
- 546 consensus on the feasibility of such metrics. Where quantitative context-based metrics do not

547 exist, organizations are required to report on their impacts in the absolute to enable  
548 information users to assess these impacts in relation to the organization's size and global and  
549 local conditions of operations.

## 550 GRI 102: About the Organization

### 551 Section 2. Organizational details and reporting practices

#### 552 a) Clarifications requested, editorial changes and new content proposed

553 Some respondents provided feedback on the disclosures about organizational details and reporting  
554 practices. These respondents requested clarifications, and suggested additional contents or editorial  
555 changes, including to:

- 556 • clarify the term 'significant operations' in REP-1;
- 557 • clarify the term 'consolidated groups' in REP-2;
- 558 • introduce a requirement to report the publication date of reported information;
- 559 • retain the contact point for questions regarding the reported information (Disclosure 102-53 in  
560 GRI 102: General Disclosures 2016);
- 561 • introduce a requirement to report criteria for making restatements in REP-4;
- 562 • clarify reporting expectations on external assurance in REP-5 (i.e., how to report what is not  
563 assured and the relationship with assurance providers).

#### 564 GSSB response:

- 565 • The term 'significant' has been removed in requirement 2-1-d (REP-1-d) and the reporting  
566 expectation in the guidance has been clarified. See Disclosure 2-1 in GRI 2: General  
567 Disclosures 2021.
- 568 • The term 'consolidated group' has been deleted in requirement 2-2-c (REP-2-c) to avoid  
569 confusion with its use in other financial instruments. See Disclosure 2-2 in GRI 2: General  
570 Disclosures 2021.
- 571 • A requirement has been added to specify the publication date of the report and the  
572 requirement to specify the contact point for questions regarding the reported information has  
573 been retained. See Disclosure 2-3 in GRI 2: General Disclosures 2021.
- 574 • A recommendation has been added in the guidance to Disclosure 2-4 (REP-4) to report the  
575 criteria used by an organization to determine when to issue a restatement. See Disclosure 2-4  
576 in GRI 2: General Disclosures 2021.
- 577 • The reference to 'what has not been assured' has been removed from requirement 2-5-b-ii  
578 (REP-5-b-ii) and guidance has been added to clarify the meaning of the 'relationship with  
579 assurance providers'. See Disclosure 2-5 in GRI 2: General Disclosures 2021.

### 580 Section 3. Organizational activities

#### 581 a) ACT-2 Employees and other workers

582 Five respondents raised concerns about the feasibility of reporting information on workers who are not  
583 employees and stated that:

- 584 • this information will be challenging to compile for large corporations operating in different  
585 businesses and regions;
- 586 • it will be challenging to measure fluctuations in the number of employees and the number of  
587 workers who are not employees;
- 588 • the term 'significant fluctuations' needs to be clarified;
- 589 • the term 'workers' needs to be clarified.

590 One respondent suggested adding a new disclosure on rightsholder mapping, identifying people and  
591 communities affected or potentially affected by company operations and supply chains.

#### 592 GSSB response:

- The requirements for reporting in accordance with the GRI Standards have been revised to permit the use of reasons for omissions for disclosures which are subject to confidentiality concerns, legal prohibitions, which do not apply to the organization, or where information is incomplete or unavailable. This includes Disclosure 2-8 in GRI 2: General Disclosures 2021 on workers who are not employees. See Requirement 6 in GRI 1: Foundation 2021.
- Guidance has been added clarifying the reporting expectation for reporting significant fluctuations, see guidance to the requirements 2-7-e and 2-8-c in GRI 2: General Disclosures 2021.
- Guidance has been added to clarify the scope of workers who are not employees and whose work is controlled by the organization. See guidance to requirement 2-8-a in GRI 2: General Disclosures 2021.
- A new disclosure on rightsholder mapping has not been added, as Disclosure 2-29 in GRI 2: General Disclosures 2021 already requires a list of the categories of stakeholders the organization engages with, which would include those whose human rights are affected or potentially affected by the organization.

## 608 Section 4. Governance

### 609 a) Reporting feasibility and reporting burden

610 Some respondents raised concerns about reporting feasibility and reporting burden of the disclosures  
611 on governance. These respondents submitted that:

- region-specific legislation may prevent disclosure of certain elements or differ from practices suggested in the GRI Standards;
- required information might be sensitive or confidential;
- reporting may be challenging for SMEs or put them at a competitive disadvantage when disclosing that governance roles, practices and policies do not exist;
- required information is repetitive of annual financial or other statutory reporting;
- some of the governance disclosures overlap;
- the relevance of the disclosures to sustainable development is unclear.

#### 620 GSSB response:

- The reporting model has been revised to permit the use of reasons for omissions for disclosures which are subject to confidentiality concerns, legal prohibitions, which do not apply to the organization, or where information is incomplete or unavailable. See Requirement 6 in GRI 1: Foundation 2021.
- Disclosures have been consolidated where appropriate.
- It has been clarified in the introduction to every Standard, and in the introduction to the Governance section, that if the organization intends to publish a standalone sustainability report, it does not need to repeat information that it has already reported publicly elsewhere, such as on web pages or in its annual report. In such a case, the organization can report on a required disclosure by providing a reference in the GRI content index as to where this information can be found (e.g., by providing a link to the web page or citing the page in the annual report where the information has been published).
- The purpose of reporting these disclosures has been clarified in the introduction to the Governance section.

635 See section 3. Governance in GRI 2: General Disclosures 2021.

### 636 b) Clarifications requested, editorial changes and new content proposed

637 Some respondents requested clarifications and suggested editorial changes or new content in the  
638 governance section, including to:

- clarify the terms 'under-represented groups', 'significant positions', 'stakeholder representation', 'internal resources', and 'critical concerns';
- expand diversity criteria beyond 'gender' when reporting on the composition of the highest governance body;
- require reporting the frequency of engagement between the highest governance body and stakeholders;

- 645
- revisit the methodology for calculating the annual total compensation ratio for a more meaningful and feasible approach.
- 646

647 GSSB response:

- 648
- *The terms have been clarified as per the public comments.*
  - *A recommendation has been added to report on the frequency of stakeholder consultation with the highest governance body. See guidance to requirement 2-12-b-i in GRI 2: General Disclosures 2021.*
  - *The methodology to report the annual total compensation ratio has been revised. See Disclosure 2-21 (Annual total compensation ratio) in GRI 2: General Disclosures 2021.*
- 652
- 653

654 **Section 5. Responsible business conduct**

655 **a) Reporting feasibility and reporting burden**

656 A few respondents raised concerns about reporting feasibility and reporting burden. These respondents submitted that:

657

- required information in Disclosures RBC-2, RBC-3 and RBC-4 could increase reporting burden for companies that already describe their policies in other sources;
  - disclosing grievances in Disclosure RBC-4 is sensitive information.
- 660

661 GSSB response:

- *The requirement to report 'the date of approval' of the policy commitments has been moved to the guidance section. See guidance to requirement 2-23-d in GRI 2: General Disclosures 2021.*
  - *All other requirements in Disclosures 2-23 (RBC-2), 2-24 (RBC-3), and 2-25 (RBC-4) in GRI 2: General Disclosures 2021 have been maintained, as the information requested is relevant and in line with authoritative intergovernmental instruments that organizations are expected to comply with, and it is often underreported.*
  - *No change has been made with respect to Disclosure 2-25 (RBC-4) in GRI 2: General Disclosures 2021, as the disclosure does not require information on the number of grievances received or the nature of the grievances, but to report the approach to identify and address grievances.*
  - *It has been clarified in the introduction to every Standard that if the organization intends to publish a standalone sustainability report, it does not need to repeat information that it has already reported publicly elsewhere, such as on web pages or in its annual report. In such a case, the organization can report on a required disclosure by providing a reference in the GRI content index as to where this information can be found (e.g., by providing a link to the web page or citing the page in the annual report where the information has been published). See 'Using this Standard' in the introduction section of GRI 2: General Disclosures 2021.*
- 678
- 679

680 **b) Clarifications requested and new content proposed**

681 Some respondents proposed adding new requirements about responsible business conduct, including requirements related to:

682

- the policy commitments related to climate, including commitments made in line with the Paris Agreement;
  - the policy commitments related to anti-corruption and political lobbying;
  - the policy commitments that contribute to sustainable development in the areas closest to the organization's business activities;
  - how the organization considers and uses the precautionary principle and where there have been incidents or impacts from its incomplete or ineffective implementation;
  - the means through which the organization communicates the policy commitments, and how it identifies and removes potential barriers to communication;
  - how external inputs are reflected in the policy commitments;
  - specific targets, milestones and contribution to the Sustainable Development Goals that relate to the organization's policy commitments;
  - procurement or investment policies and practices;
- 695

- 696 • how the organization ensures compliance with the policy commitments across functions and
- 697 geographies;
- 698 • whether the staff that cover human rights have formal training in human rights;
- 699 • how the organization has defined ‘caused’, ‘contributed’ and ‘directly linked’;
- 700 • “ethical communications side” to evaluate effectiveness of responsible business conduct
- 701 measures;
- 702 • how the board oversees the mechanisms covered in Disclosure RBC-5 and addresses their
- 703 effectiveness, and whether these mechanisms are audited by internal and/or external parties;
- 704 • the nature of the concerns raised through the mechanisms covered in Disclosure RBC-5.

705 A few respondents suggested to clarify:

- 706 • whether broader trends include social trends in the guidance to Disclosure RBC-1;
- 707 • whether Disclosure RBC-4 covers negative impacts related to human rights or negative
- 708 impacts overall;
- 709 • the difference between ‘grievance mechanisms’ and ‘other remediation processes’ in
- 710 Disclosure RBC-4.

711 GSSB response:

- 712 • *Proposed additional requirements have not been added, based on public feedback concerns*
- 713 *about reporting feasibility or sensitivity, or due to overlap of proposed content with*
- 714 *requirements in other sections or existing Standards.*
- 715 • *Some of the additional points have been included as suggestions in the respective guidance*
- 716 *sections.*
- 717 • *The guidance to Disclosure 2-22 (RBC-1) in GRI 2: General Disclosures 2021 has been*
- 718 *clarified to indicate that broader trends include social trends.*
- 719 • *The scope of Disclosure 2-25 (RBC-4) in GRI 2: General Disclosures 2021 has been clarified*
- 720 *in the guidance section, to make clear that it covers actual and negative impacts on*
- 721 *stakeholders, including impacts on their human rights.*
- 722 • *Disclosure 2-25 (RBC-4) in GRI 2: General Disclosures 2021 has been revised to make clear*
- 723 *the difference between ‘grievance mechanisms’ and ‘other remediation processes’.*

#### 724 **c) RBC-6 Compliance with laws and regulations**

725 A few respondents raised concerns, requested clarifications or proposed changes for Disclosure  
726 RBC-6. These respondents stated that:

- 727 • ‘significant fine’ is not a good proxy for impact because thresholds that define ‘significance’
- 728 vary and may be influenced by the size of the organization, and because monetary
- 729 significance does not equal significant impact;
- 730 • it is unclear whether to report all instances of non-compliance for which non-monetary
- 731 sanctions are incurred or ‘significant’ instances;
- 732 • it is unclear whether ‘incurred’ refers to fines levied or paid and suggested to separate the
- 733 disclosure to differentiate between the two;
- 734 • it is unclear how to report recurring fines which is an important matter for assurance;
- 735 • reporting the nature of each instance of non-compliance may not be feasible for large
- 736 companies where many instances occur, and it may be subject to “legal privilege” in some
- 737 territories.

738 GSSB response:

- 739 • *The disclosure has been revised to focus on significant instances rather than significant fines*
- 740 *and a requirement has been added to report how significant instances were determined.*
- 741 • *The requirements have been separated to distinguish between fines levied and fines paid.*
- 742 • *The expectation for reporting whether the fines are recurring has been clarified in the*
- 743 *guidance.*
- 744 • *The expectation for reporting the nature of instances of non-compliance has been clarified in*
- 745 *the guidance.*

746 See Disclosure 2-27 in GRI 2: General Disclosures 2021.

## 747 Section 6. Stakeholder engagement

### 748 a) SE-1 Approach to stakeholder engagement

749 A few respondents requested clarifications or proposed new content for Disclosure SE-1, including to:

- 750 • report the outcome of the engagement and what decisions were made or influenced as a
- 751 result;
- 752 • report the type and frequency of engagement with each category of stakeholder;
- 753 • report whether the engagement resulted in identifying actual and potential negative impacts,
- 754 or in determining prevention and mitigation responses to potential negative impacts;
- 755 • report on Free, Prior and Informed Consent (FPIC);
- 756 • clarify the difference between engagement and consultation;
- 757 • add 'rightsholder' terminology where appropriate.

758 *GSSB response:*

- 759 • *The relationship between 'stakeholders' and 'rightsholders', and between 'interests' and*
- 760 *'rights' has been clarified, but the term 'rightsholder' has not been used elsewhere in the*
- 761 *Standards as every person is a rightsholder. The GRI Standards use the term 'stakeholder'*
- 762 *instead. See section 2.4 Stakeholder in GRI 1: Foundation 2021.*
- 763 • *No additional requirements have been added due to concerns of reporting feasibility or due to*
- 764 *the fact that other GRI disclosures already require information on stakeholder engagement.*
- 765 • *Adding requirements to report on Free, Prior and Informed Consent (FPIC) has been deferred*
- 766 *for consideration during revisions of the GRI Topic Standards.*

## 767 GRI 103: Material Topics

### 768 Section 2. Identifying material topics

#### 769 a) General feedback

770 Some respondents expressed support for the guidance to identify material topics, and stated that it:

- 771 • supports the move from stakeholder-led materiality assessments to using a broader, richer
- 772 evidence base;
- 773 • reflects current best practice, which combines stakeholder input with market and operational
- 774 context, national and international trends, expert views, etc., and removes the risk of skewing
- 775 the materiality assessment by choosing a narrow set of external stakeholders;
- 776 • highlights the important distinction between an 'organization's ongoing identification and
- 777 assessment of impacts as part of its regular activities in order to manage its impacts' and the
- 778 'identification of material topics for reporting';
- 779 • aligns with the *United Nations (UN) Guiding Principles on Business and Human Rights* and
- 780 the *Organisation for Economic Co-operation and Development (OECD) Due Diligence*
- 781 *Guidance for Responsible Business Conduct.*

782 A few respondents, including those that expressed support for the guidance on identifying material

783 topics, raised concerns about feasibility and stated that:

- 784 • while the changes are welcome and will enable better reporting of impact, they will create
- 785 challenge and confusion;
- 786 • identifying impacts, especially negative ones, is challenging, and determining the significance
- 787 of impacts is a subjective exercise and can be hard to evaluate accurately.

788 A few respondents requested further guidance or clarification on identifying impacts, determining

789 which business entities and relationships to include in the assessment, assessing significance,

790 defining types of involvement with negative impacts (causing, contributing, directly linked), grouping

791 impacts into topics, and setting a threshold.

792 Two respondents disagreed with the approach to prioritizing human rights impacts based on severity,

793 stating that it makes the approach inconsistent and could risk including irrelevant information in

794 reporting. Yet another respondent stated that doing so is challenging. Two respondents suggested  
795 that prioritizing impacts based on severity should also apply to the topics of climate change and health  
796 and safety.

797 Respondents also submitted that:

- 798 • the proposal that only experts are consulted during Step 4 (Prioritize the most significant  
799 impacts for reporting) is not adequate, as experts could be biased by the organization itself,  
800 and the organization could manipulate the experts to get what it wants;
- 801 • it is not acceptable that an organization is the sole decision-maker in identifying potential and  
802 actual impacts. The proposed approach is putting the responsibility on the reporting  
803 organization to determine the materiality to the stakeholders. This bears the risk of green-  
804 washing and that companies self-censor topics that are material to their stakeholders;
- 805 • the identification of relevant stakeholders should be a step of the process;
- 806 • the process should be required, rather than recommended.

807 GSSB response:

- 808 • *The importance and role of stakeholder engagement in the process to identify an  
809 organization's most significant impacts has been clarified in section 2 of GRI 1: Foundation  
810 2021, and a new step has been included for organizations to identify relevant stakeholders in  
811 section 1 of GRI 3: Material Topics 2021.*
- 812 • *Additional guidance and clarification have been provided where possible, such as about the  
813 sources organizations can use to identify impacts and how to set a threshold for determining  
814 which topics are material, in section 1 of GRI 3: Material Topics 2021. However, it should be  
815 noted that the GRI Standards are not an impact identification and assessment methodology  
816 and, thus, organizations need to refer to other existing methodologies for this purpose.*
- 817 • *The approach to prioritizing human rights impacts based on severity has been maintained, in  
818 line with the United Nations (UN) Guiding Principles on Business and Human Rights. It has  
819 been clarified in section 1 of GRI 3: Material Topics 2021 that an organization may also  
820 choose to prioritize other impacts, e.g., environmental impacts, based on severity alone.*

## 821 Section 3. Reporting on material topics

### 822 a) Topic Boundary

823 A few respondents commented on the revisions to the concept of 'Topic Boundary'. These  
824 respondents stated that:

- 825 • the removal of the term 'Topic Boundary' and the revised concept is welcome, as it has  
826 caused much confusion over the years;
- 827 • the concept should be retained as an essential concept for an organization's value chain,  
828 which helps it understand the scope of its impacts. For example, a material topic like water  
829 stress can be significant, but within a very specific (organizational) boundary.

830 Four other respondents did not comment on the concept of 'Topic Boundary' but suggested it is  
831 important for organizations to consider and distinguish in their reporting between topics that are of  
832 relevance throughout a company, and topics that are context specific (e.g., whether a material topic is  
833 considered a group-wide issue, or whether it is a concern only in select countries of operation or in  
834 connection with select products or business segments).

835 GSSB response: *Requirement MT-2-b-ii in the Universal Standards exposure draft (to report whether  
836 the organization is involved with the negative impacts through its own activities or as a result of its  
837 business relationships) has been expanded to require a description of the activities or business  
838 relationships, and additional guidance has been developed. This will allow organizations to report  
839 whether a material topic is considered a group-wide issue or is a focalized issue (e.g., in certain  
840 countries, sites, business relationships). See requirement 3-3-b and corresponding guidance in GRI 3:  
841 Material Topics 2021.*

### 842 b) Concerns raised, clarifications requested and new content proposed

843 Some respondents raised concerns or requested clarifications about Disclosures MT-1, MT-2, and  
844 MT-3, including to:

- 845 • clarify if the organization has to explain what significance means to the organization based on
- 846 severity and likelihood;
- 847 • clarify if the organization has to specify which type of impact it is (e.g., negative, positive,
- 848 actual, potential);
- 849 • require reporting only the most relevant or significant impacts identified for each material
- 850 topic, as reporting all impacts can be extremely cumbersome for certain large organizations;
- 851 • limit the scope of reporting on the effectiveness of the actions taken, as the requirement is
- 852 currently very demanding;
- 853 • revise Disclosure MT-3, as it seems to focus solely on negative impacts, and readers of
- 854 reports are also interested in positive impacts and how reporting organizations act to magnify
- 855 them.

856 These respondents have also proposed to add new requirements, including:

- 857 • how stakeholders have been engaged in the process to determine material topics;
- 858 • evidence and sources of data that have informed the process to determine material topics;
- 859 • the time horizon (short, medium, long term) considered in the impact analysis;
- 860 • the threshold and criteria used when determining material topics;
- 861 • any changes to the selection of material topics after testing these priorities with external
- 862 parties;
- 863 • changes in the material topics occurring within the reporting period;
- 864 • the time frames of the positive impacts and measures being taken to ensure that the positive
- 865 impacts continue on an ongoing basis;
- 866 • how the organization uses root cause analysis;
- 867 • an analysis of crucial and huge impacts that occurred in the past.

868 Feedback from the regional consultations suggested separating requirement MT-2-a (to list material  
 869 topics) and requirement MT-2-b (to describe the impacts and involvement, for each material topic) into  
 870 different disclosures. Requirement MT-2-a has to do with materiality in general and MT-2-b requires  
 871 information about each specific material topic, which is the focus of Disclosure MT-3.

872 GSSB response:

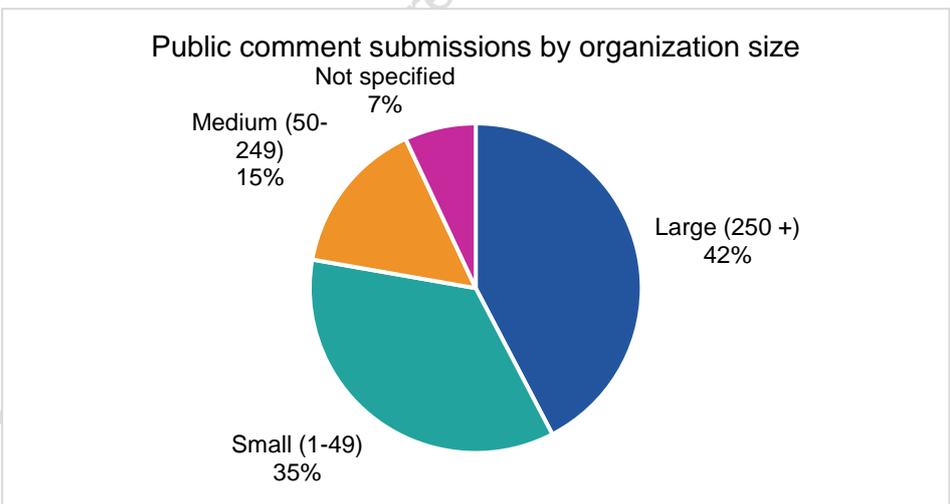

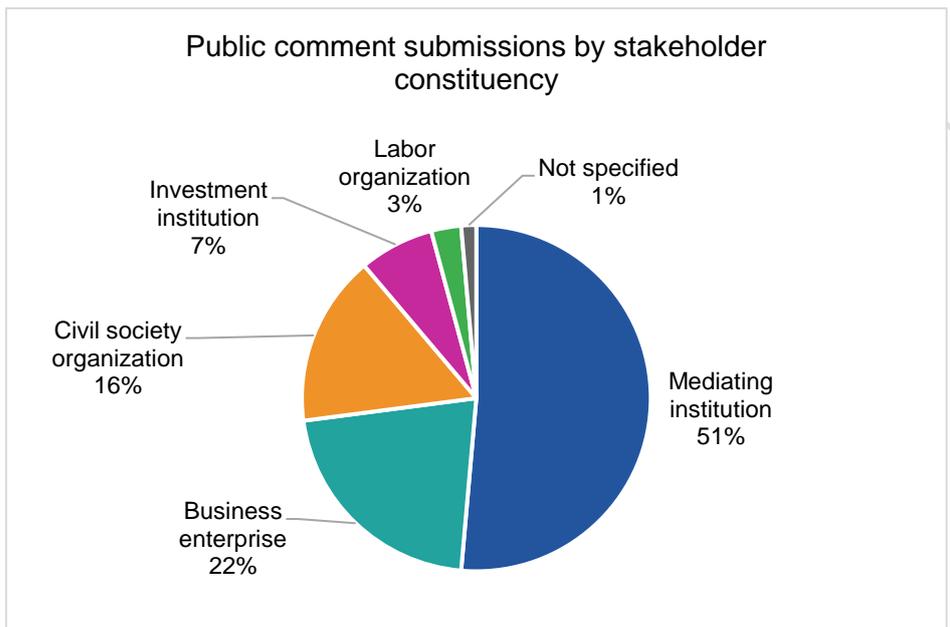

- 873 • *Requirement MT-2-b in the Universal Standards exposure draft (to describe the impacts and*
- 874 *involvement, for each material topic) has been moved into Disclosure MT-3. See requirement*
- 875 *3-3-b in GRI 3: Material Topics 2021.*
- 876 • *A new requirement has been added for organizations to report actions to manage actual and*
- 877 *potential positive impacts, in order to make clear that these actions are also to be reported.*
- 878 *See requirement 3-3-d-iii in GRI 3: Material Topics 2021.*
- 879 • *Most of the other points have been addressed in the guidance to the disclosures, as*
- 880 *suggestions for what to report, but additional requirements have not been added to the*
- 881 *disclosures to keep reporting feasible.*

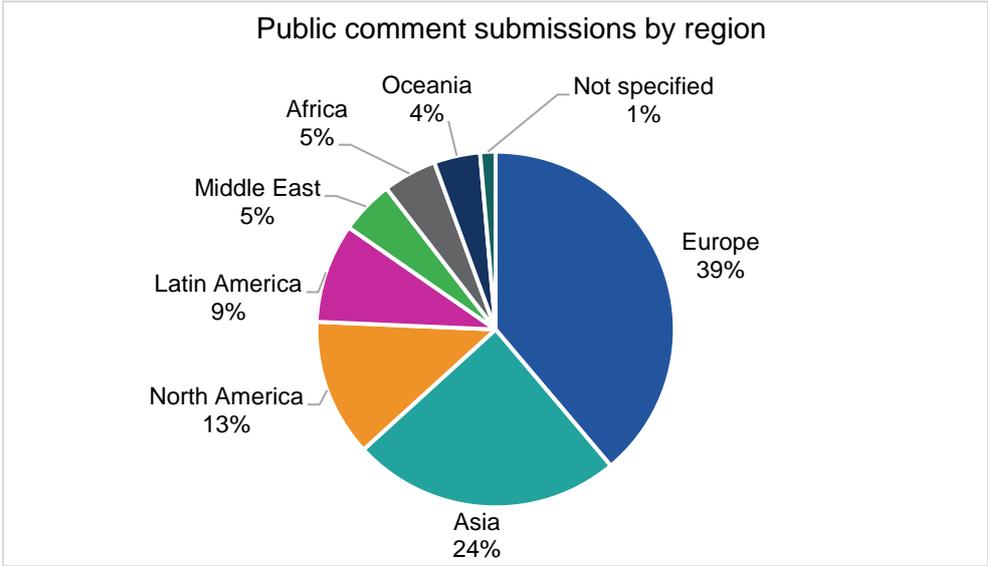

882 **Appendix 1. Participation to regional**  
 883 **workshops and webinars**

Regional workshops	Date	Number of attendees
Regional workshop North America	27 July 2020	25
Regional workshop Africa	28 July 2020	43
Regional workshop Latin America	31 July 2020	24
Regional workshop South East Asia	17 August 2020	231
Regional workshop Taiwan	19 August 2020	18
Regional workshop Hong Kong	19 August 2020	32
Regional workshop Greater China	21 August 2020	23
Regional workshop Singapore	18, 20, 21 August 2020	21
<b>Total</b>		<b>393</b>

Webinar	Date	Number of attendees
GRI live webinar	24 June 2020	380
