

## things you need to know about the new GRI 303: Water and Effluents reporting standard

Holistic framework for measuring water use and the associated impacts in direct operations and **across the value chain**, with emphasis on **context-based metrics** and areas with **water stress**

Expanded management approach to capture how water is managed as a shared resource and the **impacts on local communities**

**Content on water discharge** incorporated into the standard to understand the **water balance** and provide full picture of water use impacts, from withdrawal to consumption and discharge

Basis in the **Sustainable Development Goals**, particularly Goal #6: Clean Water and Sanitation, providing a global standard to respond to the global water crisis and report on the SDG targets

Developed together with the **leading organizations in water stewardship**, as well as business, investors, civil society, and international and governmental institutions

**New standard**
